As a dedicated M.Sc Data Analytics student with a specialized focus on Deep Learning and Machine Learning, I am actively seeking opportunities to apply my skills in AI or data science roles. With a passion for leveraging data to drive informed decision-making, I am eager to contribute to forward-thinking teams and explore innovative solutions. Through ongoing academic pursuits and hands-on projects, I am continuously expanding my knowledge and honing my abilities in data analysis and predictive modeling.

EDUCATION

Digital University Kerala

Master of Science in Data Analytics with BioAi

Thiruvananthapuram, Kerala

Aug. 2023 – Present

Yenepoya University

Bachelor of Science in Forensic Sciences, Data Analytics and Cyber Security

Mangalore, Karnataka

Nov. 2020 – Jun. 2023

INTERNSHIP

Cyber Security Analyst

Cyber Crime Police Station

Kozhikode Rural

- During my internship at the Cyber Crime Police Station, I monitored security incidents, conducted forensic investigations, and developed cyber crime prevention strategies. This role honed my cybersecurity skills and provided valuable insights into law enforcement processes and digital security practices.

PROJECTS

SADAS - A Caller Interface Platform

Community Engagement

- Developed 'SADAS', a caller interface platform designed to bridge the gap between the public and government officials. Users can call a toll-free number to report issues, which are then converted from voice to text, categorized, and forwarded to the relevant authorities. Additionally, a website allows digitally literate users to log in, track, and raise new issues. This system ensures inclusivity for non-digitally literate individuals and provides a streamlined communication channel between the community and the government.

Custom NER on Climate Change Data

Natural Language Processing

- Developed a custom Named Entity Recognition (NER) model to extract specific entities related to climate change from large datasets. Leveraged advanced NLP techniques and annotated data to improve the model's accuracy. This project provided insights into environmental data trends and enhanced the ability to analyze textual data in the context of climate change.

Speech Emotion Detection

Machine Learning

- Compared sad and not sad audio files from YouTube using various algorithms such as RNN, CNN, Random Forest, Decision Tree, and SVM. Identified the best-performing model in terms of accuracy and efficiency for classifying emotions from speech data.

Medical Image Analysis

Deep Learning

- Conducted medical image analysis using convolutional neural networks (CNN) on X-ray images. Trained the model to predict whether an image is diseased or not, achieving high accuracy in disease detection. This project demonstrated the potential of deep learning in medical diagnostics.

Design of Network Security Using Honeypots

Network Security

- Led the implementation of a robust network security framework utilizing honeypots to fortify defenses against cyber threats. Strategically deployed and monitored honeypots across critical network segments, promptly detecting and mitigating potential attacks.

CERTIFICATIONS

Cyber Security - Advanced Certificate from IBM

Google Cloud Career Launchpad Data Analyst Track

TECHNICAL SKILLS

Programming Languages: Python, SQL

Libraries and Frameworks: Pandas, Numpy, NLTK, TensorFlow, Scikit-learn

Cybersecurity Tools: Kali Linux, Wireshark, Metasploit

Data Analysis Tools: Microsoft Power BI, Tableau

SOFT SKILLS

Problem-solving abilities and Leadership quality

Effective Communication and Team Collaboration

Critical Thinking and Analytical Skills
