Dedicated M.Sc Data Analytics graduate with a focus on deep learning and machine learning, seeking a fast-paced role in AI or data science. Eager to use my practical experience and academic background to develop creative ideas.

EDUCATION

Digital University Kerala <i>Master of Computer Science with specialization in Data Analytics</i>	Thiruvananthapuram, Kerala <i>Sep. 2023 – Present</i>
University Institute of Technology, Kerala University(CGPA:6.38) <i>Bachelor of Computer Science</i>	Kollam , Kerala <i>Jun. 2019 – Mar. 2022</i>
St Joseph Convent HSS(CGPA:7.9) <i>Science (Computer Science)</i>	Kollam , Kerala <i>July. 2017 – Mar. 2019</i>
The Lake Ford School(CGPA:8.4) <i>10th Standard(CBSE)</i>	Kollam , Kerala <i>Jun. 2016 – Mar. 2017</i>

PROJECTS

FPO Analytical platform | *Python*

- My project is an online platform to connect farmers group in order to sell their products without mediators. FPO is formed by combining (FIGS) Farmers Interest Group from various part of the state. FIGS collect the products from farmers and FPO will purchase these products from FIGs without mediators. The platform is a solution for the farmers those who cannot sell their products as well as those who do not get proper price for their products. .

Freshness Quantification and Optimal Delivery platform | *Python*

- Recent surveys demonstrate that one third of agricultural products produced for human consumption is lost or wasted every year. To overcome this loss, delivery cycles from producer to the market need to be reduced. To reduce this delivery cycle time we need to detect the freshness of each item by collecting the data such as Item details, Cultivation date Time, Harvesting date time, Perishable date and time, Shipment date, Purchase date, Freezed item or not etc. The AI and Analytical capability to track and estimate an age or Freshness Quantification and Fraud detection of the perishable product enables its manufacturer to identify where. product expirations will occur, if any, lag behind others (FIGs, FPOs and End customers) in selling the product.

Credit Card Fraud Detection Machine Learning | *Machine Learning*

- Implemented a credit card fraud detection system using machine learning techniques. Analyzed transaction patterns to identify fraudulent activities and enhance security measures. This system improves the accuracy and speed of detecting fraudulent transactions, reducing financial losses and protecting customer information

TECHNICAL SKILLS

Programming Languages: Python, HTML/CSS, DBMS-SQL(Postgres), JavaScript ,PHP, C ,C++
Libraries: Pandas, Seaborn, Scikit-learn, NLTK, NumPy, Matplotlib
Developer Tools: Tableau, Microsoft Power BI

CERTIFICATIONS

IELTS :Overall-6.5 band
Google Cloud career Readiness- Data Analyst Track.

WORK EXPERIENCE

Company: Tektide Innovations | *Aug 2022-Aug 2023*
Job role: Program trainee
Job description: Participated in the development of University Management application.

LANGUAGES

English,Malayalam-Native,Hindi
