🌐 <https://github.com/Shahadshad007>

As a devoted data analytics student, I bring a solid understanding of statistical analysis, data visualization, and data-driven decision-making. With hands-on expertise with tools such as Python and SQL, I am capable of translating complex datasets into useful insights. My academic projects helped me improve my ability to detect trends, solve problems, and effectively explain discoveries. I am eager to contribute to innovative teams and committed to using my analytical skills to drive strategic outcomes and business growth.

EDUCATION

Digital University Kerala <i>Master of Computer Science with specialization in Data Analytics</i>	Thiruvananthapuram, Kerala <i>SEP. 2023 – Present</i>
Farook college, Calicut University <i>Bachelor of Science in Mathematics</i>	Kozhikode , Kerala <i>Aug. 2020 – Mar. 2023</i>
IOHSS EDAVANNA <i>Science (Biology)</i>	Kozhikode , Kerala <i>July. 2018 – Mar. 2020</i>

PROJECTS

Modeling Population Dynamics with ODEs and MATLAB Visualization

- Understanding population dynamics is crucial in mathematical modeling, particularly for predicting changes in population size due to births and deaths. We use ordinary differential equations (ODEs) to create an effective model for human population growth, incorporating birth and death rates. This mathematical framework balances population growth and natural attrition. By utilizing MATLAB, we visualize the ODE solution, providing graphical insights into population behavior. This multidisciplinary project combines biology, mathematics, and computer technology, enhancing data science and scientific modeling.

Social Media User Analysis | Natural Language Processing

- Analyzing social media users with NLP involves collecting data from platforms like Twitter and Instagram, processing text for sentiment and topic analysis, and identifying key entities. User profiling and network analysis reveal behavior and influence. Tools like NLTK and SpaCy are essential for these tasks, providing deep insights into social media interactions.

Website for Handloom Designs | Web Development

- The DACE (Digital Access for Community Empowerment) program at DACE University is a 3-credit Master's course designed to equip students with digital skills to solve community problems. The program combines theory, practical workshops, field trips, and collaborative discussions. Students work in diverse teams of five to develop innovative digital solutions that empower communities. Currently, a team is set to collaborate with the Keleswaram Sree Bhagavathy Handloom Weavers Cooperative Society to drive positive change..

TECHNICAL SKILLS

Programming Languages: Python, HTML/CSS, DBMS-SQL(Postgres)
Libraries: Pandas, Seaborn, Scikit-learn, NumPy, Matplotlib, Regex, openCV, Tensorflow
Developer Tools: Tableau, Microsoft Power BI, Latex

SOFT SKILLS

Time Management
Problem-solving skills and Statistical Proficiency

LANGUAGES

English,Malayalam-Native,Arabic
