

SIVAKAMI P

Data Analyst

Highly motivated and passionate Data Analytics student with a focus on Bio AI, seeking to leverage academic knowledge experience in a challenging role . Eager to apply my skills in a professional setting. Passionate about learning and staying abreast of industry trends, I am excited to contribute my enthusiasm and technical proficiency to new and challenging projects.

EDUCATION

Bachelor of Science (BSc) in zoology

ST MARY'S COLLEGE MANARCAUD,
KOTTAYAM

2017 - 2020

MSc Data Analytics and BioAI

Kerala University of Digital Sciences,
Innovation and Technology,
Thiruvananthapuram

09/2023 - Present

PROJECTS

simple pneumonia classifier web application built using Streamlit.

- This project is a simple pneumonia classifier web application built using Streamlit. The application predicts whether a patient has bacterial or viral pneumonia based on a set of symptoms.

Developed a Sentiment Analysis Application

- This project is a Streamlit web application that performs sentiment analysis on user-provided text. The application uses a pre-trained machine learning model to classify the sentiment as either positive or negative.

Time Series Analysis of Solar Cell Efficiency for Renewable Energy Optimization

- Conducted a comprehensive study on the efficiency of solar cells, focusing on optimizing renewable energy systems through advanced time series analysis. The project aimed to model and forecast the efficiency trends of solar cells based on historical solar irradiance and temperature data, providing valuable insights for the installation and optimization of solar energy systems at Digital University of Kerala.

Assessing Water Quality Through Dragonfly and Damselfly Species Diversity(Degree Project)

- Conducted an in-depth study on the use of dragonfly and damselfly species diversity as biological indicators for assessing water quality. The project aimed to evaluate the correlation between the presence and diversity of these species and the overall health of aquatic ecosystems.
- This degree project demonstrated a strong ability to conduct field research, perform detailed data analysis, and apply biological indicators for environmental assessment, contributing valuable insights to the field of aquatic ecology and conservation.
